Animate the 11 keyframes

Goal: turn each approved keyframe into a 5-second animated clip with image-to-video. The edit, music and logo match cut are already locked; these clips replace the still frames shot by shot.

1. **Tool:** image-to-video in Sora (ChatGPT), Kling, Veo (Gemini or Flow) or Runway. Kling and Veo hold faces and the cap best.
2. **For each shot:** upload the input image named on its card, paste its motion prompt, and generate.
3. **Settings:** 16:9, 1080p if offered (720p is fine), 5 seconds, no added text, sound off. The first frame must stay identical to the input image.
4. **Keep:** Anu's face, hair and outfit, and the cap's four panels with the lavender visor. If a take changes them, regenerate it.
5. **Generate 2–3 takes** per shot when you can, and send all of them, named `PH_V_K1_take1.mp4` and so on. I'll pick the best motion and trim to the timing.
6. Prefer slow, physical motion. Avoid morphing, sudden zooms, or new people appearing.

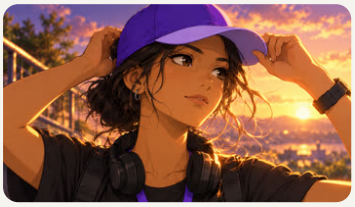

Each card shows how long the shot is on screen. Clips run 5 s, so I can choose the best part.

K1

input: PH_K1_venue_wide.png · used for 3 s at 0:00 · save as `PH_V_K1.mp4`

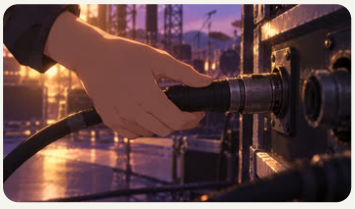

Slow, smooth cinematic push-in toward the stage. Dust drifts through the sunbeams, crew silhouettes walk across carrying flight cases, stage lights blink on one by one, clouds drift slowly. No cuts.

K2

input: PH_K2_cap_on.png · used for 2 s at 0:03 · save as `PH_V_K2.mp4`

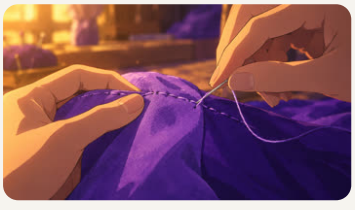

She pulls the cap down onto her head with both hands and settles the visor forward, then lifts her eyes to the horizon with a small confident smile. Wind moves her hair; the sun flares softly. Camera holds with a slight push-in.

K3a

input: PH_K3a_cable.png · used for 1 s at 0:05 · save as `PH_V_K3a.mp4`

The hand pushes the connector home and twists it to lock with a firm, decisive motion; light glints along the metal. Shallow depth of field, very slight camera drift.

K3b

input: PH_K3b_stitch.png · used for 1 s at 0:06 · save as `PH_V_K3b.mp4`

The needle pulls the thread through the purple fabric in one smooth stitch; the thread draws tight and the fingers smooth the seam.

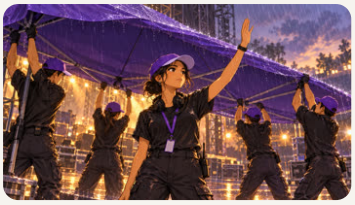

K3c

input: PH_K3c_lamp.png · used for 1 s at 0:07 · save as `PH_V_K3c.mp4`

The stage lamp is dark, flickers twice, then switches fully on and glows warmly; the light blooms and dust floats in the beam. Camera static.

SHOTS (CONTINUED)

K4 input: PH_K4_rain.png · used for 4 s at 0:08 · save as `PH_V_K4.mp4`

Heavy rain. The four crew members push the canopy up in one coordinated motion and it opens overhead; she keeps one hand raised, calm. Rain splashes off the canopy and the wet ground. Camera slowly pulls back.

K5 input: PH_K5_lanterns.png · used for 4 s at 0:12 · save as `PH_V_K5.mp4`

Paper lanterns rise slowly into the night sky, guests walk toward the stage, lantern light flickers, stage lights pulse purple. Camera tilts slowly upward toward the lanterns.

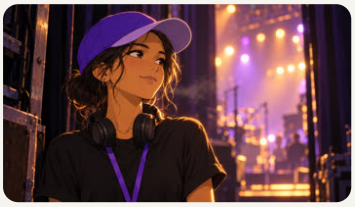

K6 input: PH_K6_countdown.png · used for 3 s at 0:16 · save as `PH_V_K6.mp4`

She counts down into her headset: three fingers, then two, then one, her lips moving with each number; light from the stage pulses across her face. Subtle handheld camera.

K7 input: PH_K7_crowd.png · used for 4 s at 0:19 · save as `PH_V_K7.mp4`

The stage lights burst on and a wave of purple and gold light sweeps over the crowd; people cheer, jump and raise their hands as confetti falls. Camera slowly pulls back.

K8 input: PH_K8_exhale.png · used for 2.5 s at 0:23 · save as `PH_V_K8.mp4`

She exhales slowly, her shoulders relax, and a small proud smile forms; stage lights shimmer in the bokeh behind her; a strand of hair moves. Camera almost still, very slow push-in.

K9 input: PH_K9_overhead.png · used for 3.3 s at 0:25 · save as `PH_V_K9.mp4`

Looking straight down from above. The camera rotates slowly and comes to a stop; the rings of lights twinkle and guests move around the circle. She stands still at the centre. Keep her cap exactly as in the image: four panels, lavender visor pointing right.

Shot 10 (the cap becoming the logo) is done in the edit, so no clip is needed. Push the clips to the `anime-keyframes` branch, in `assets/anime/clips/`, as before.
